Introduction

The Visual Impairment Service Team (VIST) program is designed to enhance the efficiency of the Visual Impairment Service Team programs within the Department of Veterans Affairs (VA). With this program VIS Teams are able to easily manage and track activities and services provided to blinded veterans in their service area. This program integrates several fields of patient data to produce a variety of reports. The VIST patient record printout can be used in place of VA Form (10-1371) and is a more versatile document than the card. Semi- annual AMIS reports can be run and veterans can be added or deleted from the rolls quickly.

☞ During the installation of VIST V. 4.0, all data entered using the class III Blind Rehabilitation software will be moved into the new files created for VIST V. 4.0. This conversion time will vary depending on the amount of patient information that was entered into the class III files.

Information Resources Management (IRM) is the primary user of this manual. Users who are not familiar with Veterans Health Information systems and Technology Architecture (**V***IST***A**) software may also wish to refer to documentation for VA Kernel.

Icons

Icons used to highlight key points in this manual are defined as follows:

☞ Indicates the user should take note of the information.
